# Implementation of Climate Monitoring from space

# 30 years: From **EXPERIMENT** to **OPERATION**

No.	Satellite_ID	Launched time	End of service
1	FY-1A	1988.09	1988.10
2	FY-1B	1990.09	1991.08
3	FY-1C	1999.05	2004.04
4	FY-1D	2002.05	2012.04
5	FY-3A	2008.05	2015.01
6	FY-3B	2010.11	
7	FY-3C	2013.9	
8	FY-3D	2017.11	

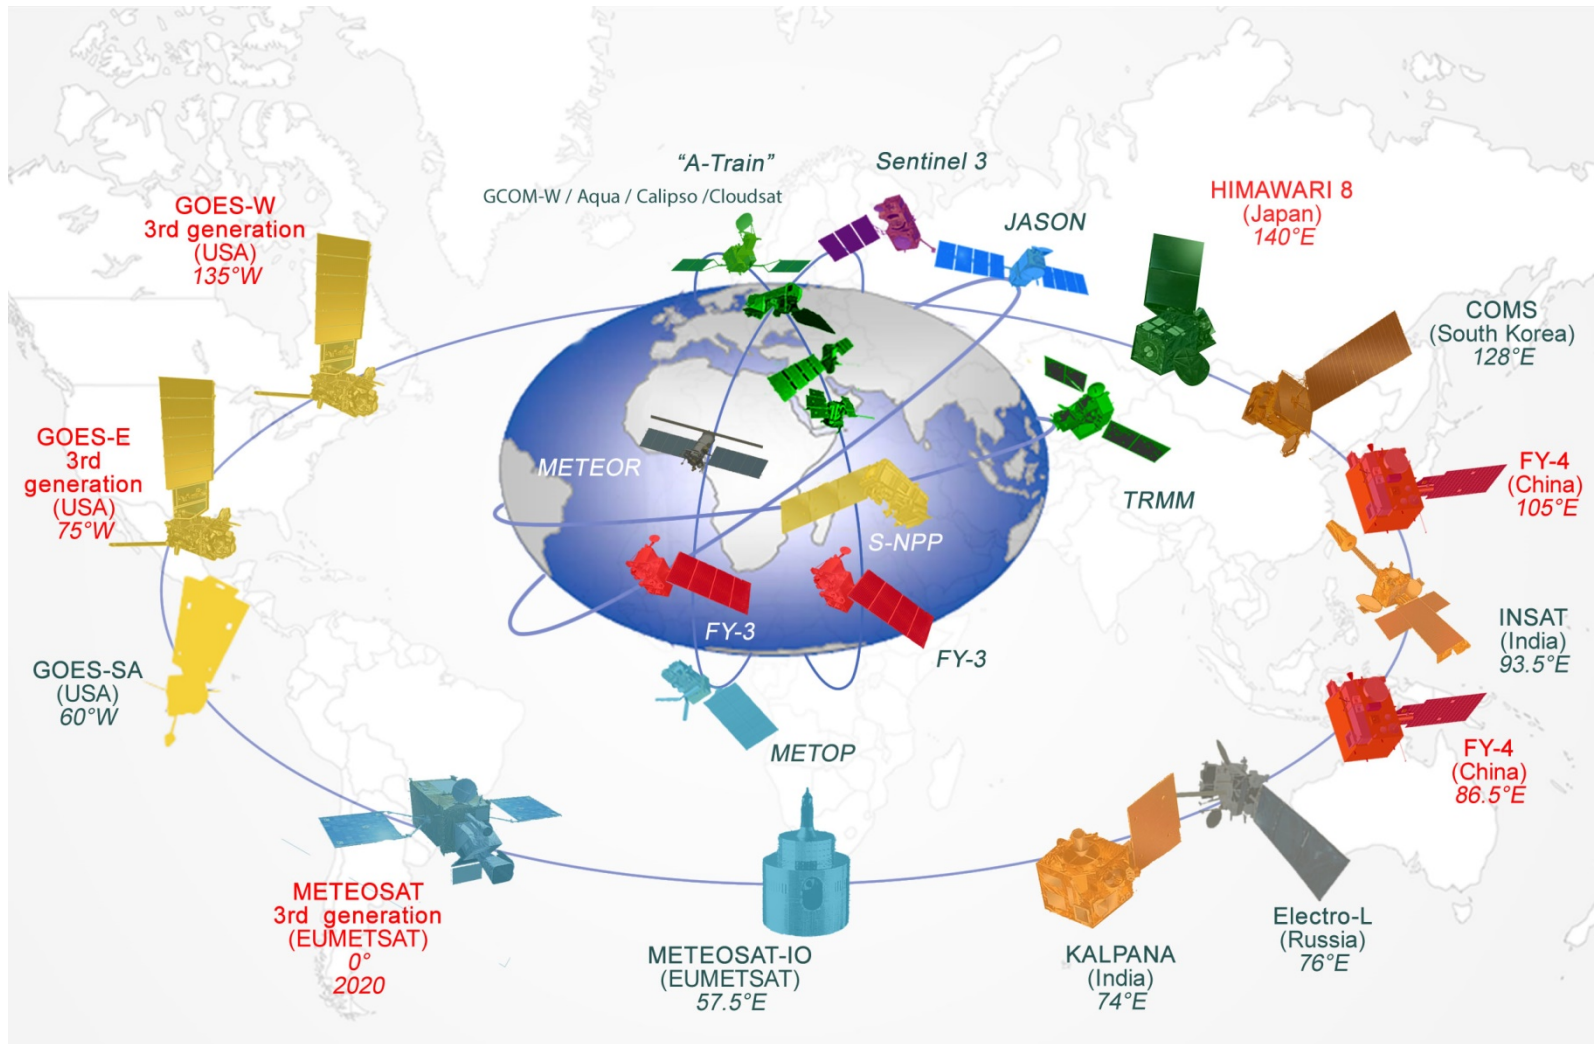

The First FengYun Polar Satellites: FY-1(1988)

No	Satellite-ID	Coverage	Launch time	End of service
1	FY-2A	Full Disk / 1-h	1997.06	1998.04
2	FY-2B	Full Disk /1-h	2000.06	2004.09
3	FY-2C	Full Disk /1-h	2004.10	2009.11
4	FY-2D	Full Disk /1-h	2006.11	2015.06
5	FY-2E	Full Disk /1-h	2008.12	
6	FY-2F	Full Disk / 1-h + Regional Rapid Scan / <6 min	2012.01	
7	FY-2G	Full Disk /1-h	2014.12	
8	FY-2H	Full Disk /1-h	2018.06	
9	FY-4A	Full Disk /15-min	2016.12	

# FY-3 products

	Products of FY-3A/3B/3C	New products of FY-3D
Atmospheric	Cloud mask, fog detection, Cloud Amount, cloud type, cloud phase, cloud top temperature/height, cloud optical depth, Profile, cloud water content, Cloud Liquid Water, outgoing longwave radiation, Flux at TOA, atmospheric Total Precipitable Water, Dust Storm Index, aerosol optical depth, rain detection, Atmospheric Humidity/temperature, precipitation, Total Ozone, Ozone Profile, Ice Water Paths, Microwave Rain Rate and Aerosol index, GNOS atmospheric density profile, GNOS atmospheric temperature profile, GNOS refractivity profile, GNOS atmospheric humidity profile, atmospheric motion vector	CO2、CO、CH4、O2
Land	Global Fire detection, Land Cover, Land Surface reflectance, Land Surface Temperature, soil moisture, albedo, NDVI, LAI, FPAR, NPP, Snow Cover, snow depth/Snow Water Equivalent	
Ocean	SST, Sea-Ice coverage, Ocean Color/Chlorophyll, Sea surface wind speed	

# FY-2 and FY-4 Products

---

## FY-2 C/D/E operational products

Upper Tropospheric Humidity  
Precipitation Estimation

Surface Solar Irradiance  
Blackbody brightness temperature  
Outgoing Long wave Radiation

Sea Surface Temperature

Snow Cover

## FY-2 F/G/H operational products

Upper Tropospheric Humidity  
Precipitation Estimation  
Atmospheric Motion Vector

Surface Solar Irradiance  
Blackbody brightness temperature  
Outgoing Long wave Radiation

Land Surface Temperature  
Sea Surface Temperature

Snow Cover

## FY-4A baseline products

Rainfall Rate/QPE  
Atmospheric Motion Vector  
Lightning Detection  
Surface Solar Irradiance  
Blackbody brightness temperature  
Outgoing Long wave Radiation  
Downward Long wave Radiation: Surface  
Upward Long wave Radiation: Surface  
Reflected Shortwave Radiation: TOA  
Land Surface (Skin) Temperature  
Sea Surface Temperature (skin)  
Land Surface Temperature  
Land Surface Albedo  
Land Surface Emissivity  
Snow Cover  
Fire/Hot Spot Characterization

# Reprocessed long-term datasets

ECV variables such as Cloud, OLR, NDVI, LST, SST, Snow cover *et al.* are reprocessing

**FY-2 products (AMV、TBB) and FY3B products (OLR) is used in South China Sea(SCS) summer monsoon monitoring.**AMV summer monsoon index: the wind field transition in SCS summer monsoon region.TBB summer monsoon convection index: the convection activity in SCS summer monsoon region.

Asia is the main active region of the monsoon. The onset time and intensity of summer monsoon significantly affect the distribution and intensity of rain belts and typhoon activities in the Asian monsoon.

**BOB summer monsoon index in 2019**

SCS: (110-120E; 10-20N)  
BOB: (80-100E; 10-20N)

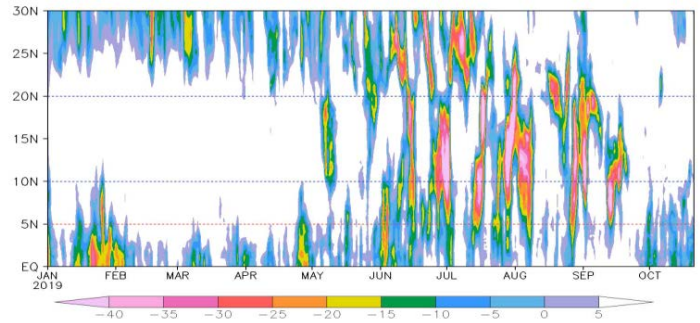

**SCS summer monsoon index in 2019**

**Time series of TBB in BOB summer monsoon region in 2019**

**Time series of TBB in SCS summer monsoon region in 2019**

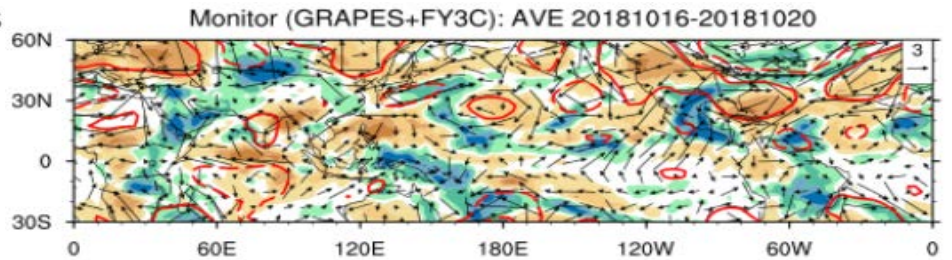

# MJO monitoring using FY-3C OLR

## RMMI Reconstructed Pentad-mean Patterns PREC (shade) & OLR (contours) & UV850 (vectors)

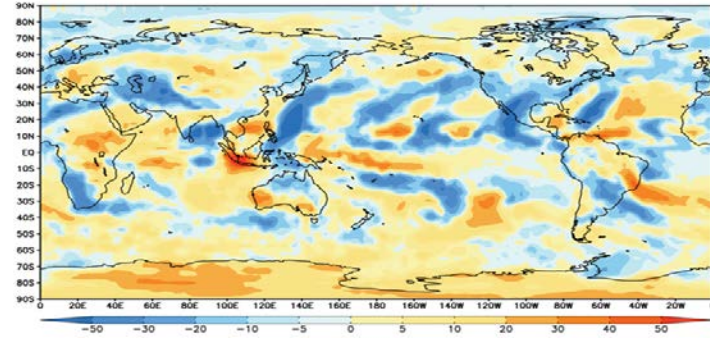

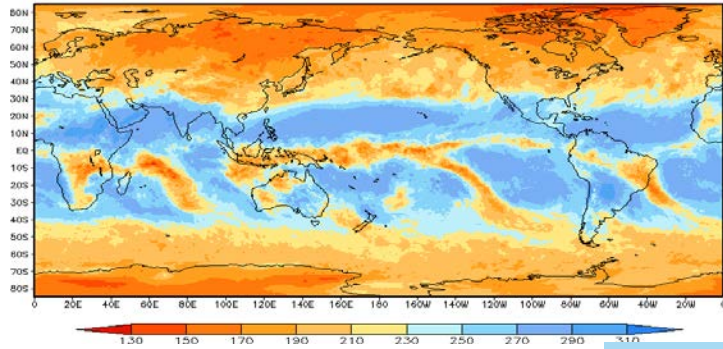

OLR Anomaly (shade) and Equatorial wave (contour)  
MJO (black) & Kelvin Wave (red) & Equatorial Rossby Wave (blue)  
Monitor (FY3C): 20180623-20181020  
Forecast (BCC\_AGCM2.2): 20181021-20181209 unit:  $W/m^2$

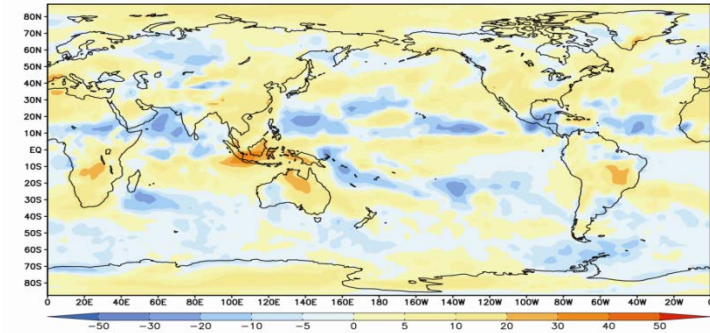

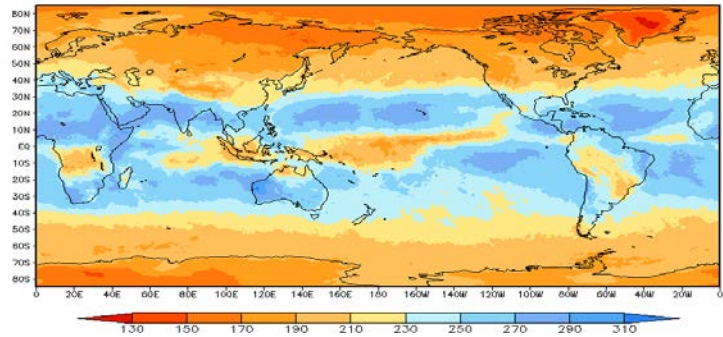

# tropical convective activity monitoring

5-day OLR & Anomaly

Monthly OLR & Anomaly

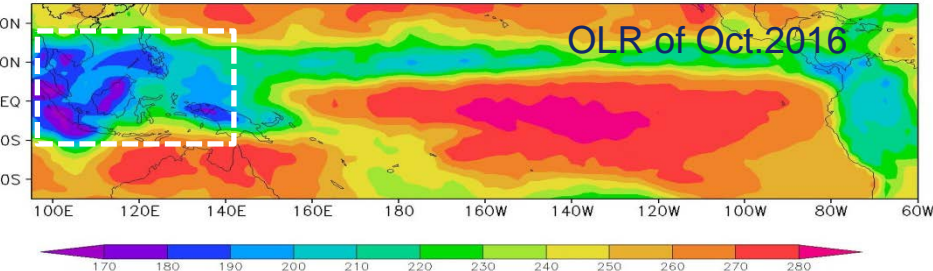

Daily SST anomaly for NINO3.4 2016  
(5S-5N; 170W-120W)

Mid-east Pacific Ocean shows significantly high SST in the first half of 2016, indicating the phenomenon of El Nino. Started from May, SST gradually appears negative, transferring to La Nina.

During El Nino, convections occur at mid-east Pacific Ocean.

During La Nina, convections occur around South China Sea and Philippine.

# Snow Cover Days in Asia/China

# 3 FY data in Climate model

## 1) FY-3 Land surface temperature assimilation test

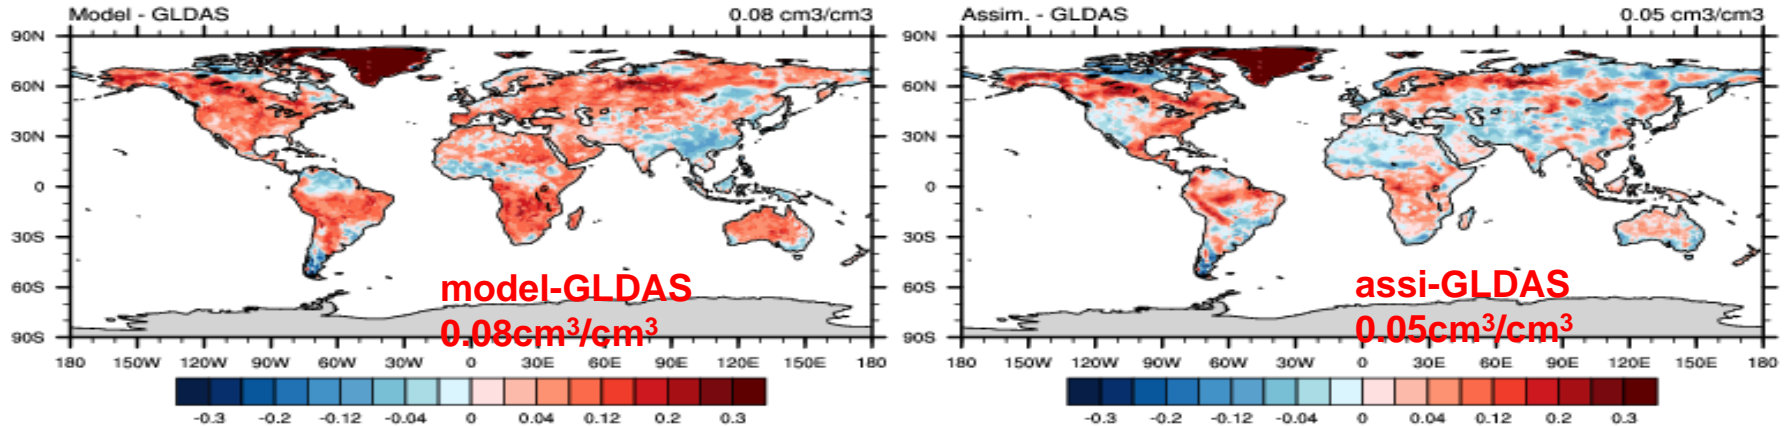

Global mean monthly bias and RMSE of FY3 (before and after QC) and MODIS vs GLDAS

Global mean monthly bias distribution of before (left) and after (right) assimilation

- Based on FY3, the LST data assimilation test system was established in BCC.
- After QC and BC, the quality of FY3/LST data is comparable to MODIS, and can meet the needs of quantitative application in BCC model.
- After assimilation, the global mean bias of LST is reduced by about 3K.

## 2) FY-3 Soil moisture assimilation test

Global mean monthly bias distribution of model (left) and assimilation (right) soil moisture

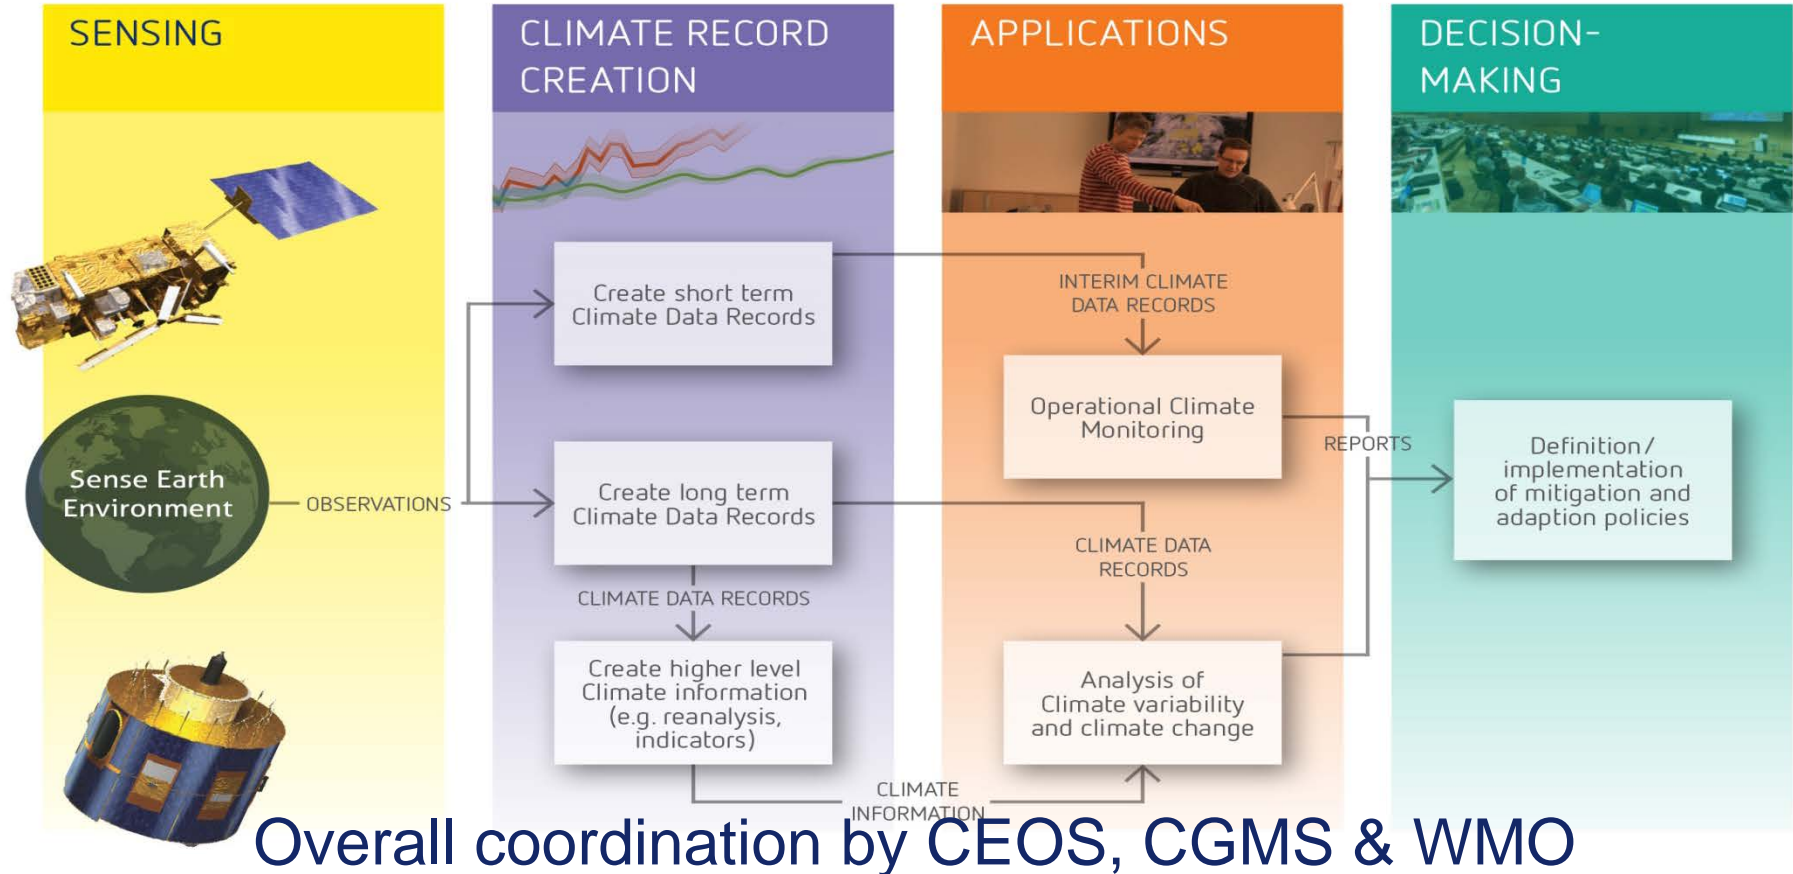

- The soil moisture data assimilation test system was also established in BCC.
- Assimilating FY3 soil moisture products can effectively improve the simulation of BCC\_AVIM model, and significantly reduced the overall soil moisture bias and errors.

# CRA-40:CMA Global Reanalysis

- Started in early 2014, lead by the **NMIC** of CMA
  - 3 other CMA national centers and 3 outside institutes involved:
    - NMC, NSMC, NCC, CAS/IAP, BNU, NUIST
- Include **Atmosphere** and **Land** component
- **Produce 40-year datasets (1979-2018) :**
  - **Ingested observations**
  - **Grid products: ~30km, 6 hourly**
  - **Obs. feedback datasets** : departure from analysis & background
  - **Atmospheric Reanalysis uncertainty** : from EnKF ensembles
- **Will then be continuously running in NRT for climate monitoring**
